DATA & AI LEADER · ASSET MANAGEMENT

Kevin *Maroney*

Director-level · 12+ Years · Investment Data & AI Platform Engineering

This resume; built through Claude. This section; written by me.

What a fun world we live in. Agentic workflows and AI services dramatically scale what we can deliver as data functions. What's the role of a data leader tomorrow:

- Set clarity on vision and expectations.
- Create an environment that rewards bold imagination and curiosity.
- Cultivate T-shaped judgment: stay broad on how the system fits together, go as deep as the problem requires, and always know what good looks like.
- Be the best in the room at asking questions.
- Surround yourself with exceptional people — and retain that talent.

My experience is wide. I've worked across multiple brand-name asset managers, spanning the disciplines of a data organization. My differentiator is knowing what matters and enabling teams through technology, process, and culture to optimize their output — ultimately optimizing value for the organization.

Experience

Data & Analytics Lead, Investor Relations

The Carlyle Group · New York, NY

2024 – Present

Leading data and analytics strategy for Investor Relations — working directly with client-facing and product leadership across Global Wealth and Institutional channels to connect foundational data infrastructure to the use cases that matter. Co-sponsoring TEMPO, an AI-native platform initiative reshaping how IR insights are created, distributed, and acted on across the firm.

PLATFORM STRATEGY

- Diagnosed the disconnect between IR consumers and data engineers; designed a unified strategy spanning use-cases, consumption, transformations, and source systems — bridging technical execution with channel-level business priorities

AGENTIC DARWIN — BUILT IN 4 WEEKS

- Cursor-based agentic dbt workflow delivering a 50% reduction in time from requirement to merged PR, with full traceability across the development lifecycle
  - Jira client: task creation, status tracking, and card movement automation
  - Automated testing framework for technical and business validation throughout dev
  - GitHub integration for PR creation and structured code review
  - Confluence client auto-generating data product documentation at delivery

AI PLATFORM TEMPO — CO-LED WITH FIRM'S AI LEAD

- Unified IR Data Model across Global Wealth and Institutional lines via dbt semantics and Snowflake; onboarded Preqin as a third-party data source with entity mapping to internal CRM data
- Curated data product layer for core IR domains: commitments, pipeline, interactions
- Lightweight MCP layer coordinating LLM prompts into structured API-exposed tool instructions
- Onboarded Claude as the firm's AI layer; built reusable skills enabling IR self-service across three flagship use cases:

- LP Compass — AI-powered scoring models connecting internal data to LP profiles, enabling targeted outreach through Claude-exposed workflows
- Next Best Call — Targeted advisor list for GW channel, surfaced via Salesforce integration to prioritize high-value outreach
- Redemption Risk — Propensity-to-redeem model built on engagement, transaction, and fund-level behavioral patterns to flag at-risk allocators early

RESULTS

▲ 50% reduction in time from requirement to PR

▲ 120% WAU increase — Institutional Suite

Business Impact: Measurement in Progress

VP, Data Analytics & Data Engineering

ESL FACEIT Group (EFG) · New York, NY

2024

Senior Director, Data & Analytics

Keyrus — Apollo Global Management engagement

2021 – 2024

Senior Director, Data & Analytics

Keyrus — T. Rowe Price engagement

2017 – 2020

Senior Director — Internal Leadership

Keyrus · 2013–2024 · Also: BNY (2016), Bank of America (2013–2015)

2013 – 2024

// CAPABILITIES

Skills & Technologies

AI & AGENTIC ENGINEERING

- MCP Protocol & Architecture
- Agentic Workflow Design (Darwin)
- LLM Integration & Deployment
- Claude / Anthropic
- OpenAI · Gemini

DATA PLATFORM

- Snowflake · Databricks
- dbt · Fivetran · Airbyte
- Airflow · AWS · Azure
- Streaming Architecture
- Data Modeling (Lakehouse, Vault, Mesh)

ENGINEERING & DEVOPS

- Python · SQL
- GitHub · CI/CD Pipelines
- Data Governance & Lineage
- Jira · Confluence Integration
- Semarchy · Metaplane

GLOBAL DATA & ANALYTICS ORGS (20–30)

- Investment / IR Data Specialist
- C-Suite & COO Advisory
- Platform Strategy & Roadmap
- Data Operating Model Design

BI & VISUALIZATION

- Tableau · Power BI · Looker
- Qlik · Alteryx

EDUCATION

B.S. Finance

Lehigh University

Class of 2013
